

Agent Handbook — 06 Payment Integrity & Coding

Reviews claims and coding for payment-integrity issues and **flags only** — no recoupment, no submission. Maturity: Demonstrated + Deployable-by-design; production-readiness (CSV/CSA, IdP, live connectors, pen test, HITRUST) is the engagement; AWS BAA precedes any PHI.

Workflow + human gate

Ingest a claim / coded encounter → run edit checks (NCCI / MUE, DRG validation) against the chart → ground each finding to the supporting evidence → **flag** suspected over/under-coding or integrity issues → **suspend at the Reviewer gate. Named human gate:** Reviewer. CMS reports \$28.8B of \$37.4B improper-payment exposure in the relevant programs — the value is accurate flagging, not automated action.

Systems / connectors (with standards)

- **EHR / FHIR** — Epic / Oracle Health via Amazon HealthLake (FHIR R4): chart evidence.
- **Encoder** — **NCCI / MUE** edits, **DRG** validation references for grounding.
- **Clearinghouse** — **X12 837 / 835** for the claim and remittance context.

Workforce roles to map in the IdP

CODING_SPECIALIST (the Reviewer gate). Map to custom:hpp_role.

Withheld authority (what it never does)

Flags only — no recoupment, no claim submission, no code change to the record. The agent surfaces findings with evidence; the Reviewer decides whether to act. No autonomous financial or coding action.

Deploy (fixture mode, no PHI)

scripts/build_lambdas.sh

scripts/deploy.sh 06-payment-integrity-coding dev portable native s3://my-cfn-staging/hpp 10.35.0.0/16

- Params: infra/cloudformation/params/06-payment-integrity-coding.json · Terraform: terraform apply -var-file=envs/06-payment-integrity-coding.tfvars
- VPC CIDR 10.35.0.0/16.

Human-gate smoke test

1. Sign in as a seeded CODING_SPECIALIST.
2. Drive a review that produces a coding flag → confirm the run **suspends** at the Reviewer gate; HITL item appears with grounded evidence.
3. Approve a flag → recorded to the **append-only PHI-masked audit**; reject → dropped.

4. Attempt any recoupment / submit / code-change tool → **denied by default** (flags-only).

Key regs

HIPAA Privacy/Security, HITECH; **False Claims Act** / **OIG** (coding integrity); CMS improper-payment / RADV rules; NCCI/MUE and DRG coding policy.

Go-live checklist

- ☐ AWS BAA + SI BAA executed; no PHI before both.
- ☐ IdP federated; CODING_SPECIALIST mapped to custom:hpp_role.
- ☐ NCCI/MUE + DRG references and FHIR/clearinghouse (X12 837/835) connectors validated.
- ☐ Grounding tuned so every flag traces to chart/edit evidence; CSV/CSA signed off; HITL SLA ratified.
- ☐ Pen test + HITRUST/SOC 2 evidence assembled; observability + runbooks adopted.
