

Agent Handbook — 08 Contact Center / Member Services

Assists member-services reps on Amazon Connect — with an identity gate before any disclosure — and **cannot submit an appeal**. Maturity: Demonstrated + Deployable-by-design; production-readiness (CSV/CSA, IdP, live connectors, pen test, HITRUST) is the engagement; AWS BAA precedes any PHI.

Workflow + human gate

Take a member contact on **Amazon Connect** — **verify member identity before any disclosure** → retrieve account/claim/benefit context through governed connectors → draft a response or next-step summary → **suspend at the Member-Services-Rep gate** for any consequential action. **Named human gate**: Member-Services Rep. A live agent call costs ~\$25–\$35 — the value is faster, accurate, governed assistance, not autonomous action.

Systems / connectors (with standards)

- **Contact center** — **Amazon Connect** (voice/chat) as the channel.
- **EHR / FHIR + Payer** — member, coverage, claim status via FHIR (Amazon HealthLake) and **X12 276/277** (claim status), **270/271** (eligibility).
- **Identity** — member identity verification before disclosure.

Workforce roles to map in the IdP

MEMBER_SERVICES_REP (the gate). Map to custom:hpp_role.

Withheld authority (what it never does)

Cannot submit an appeal and **never discloses member data without passing the identity gate**. The agent assists and drafts; the Member-Services Rep owns any consequential action (including appeal submission, which is withheld from the agent).

Deploy (fixture mode, no PHI)

scripts/build_lambdas.sh

scripts/deploy.sh 08-contact-center-member-services dev portable native s3://my-cfn-staging/hpp 10.37.0.0/16

- Params: infra/cloudformation/params/08-contact-center-member-services.json · Terraform: terraform apply -var-file=envs/08-contact-center-member-services.tfvars
- VPC CIDR 10.37.0.0/16.

Human-gate smoke test

1. Attempt a disclosure **before** identity verification → confirm the **identity gate** blocks it.
2. Sign in as a seeded MEMBER_SERVICES_REP; verify identity; retrieve context.

3. Drive a consequential action → run **suspends** at the Member-Services-Rep gate; approve → proceeds and is written to the **append-only PHI-masked audit**; reject → no action.
4. Attempt an appeal-submission tool → **denied by default** (withheld).

Key regs

HIPAA Privacy/Security, HITECH; **Section 1557** (language access / nondiscrimination); CMS member-communication rules; identity-proofing best practice.

Go-live checklist

- ☐ AWS BAA + SI BAA executed; no PHI before both.
- ☐ IdP federated; MEMBER_SERVICES_REP mapped to custom:hpp_role.
- ☐ **Amazon Connect** integrated; FHIR + X12 276/277/270/271 connectors validated.
- ☐ Identity-proofing flow validated; Section 1557 language access reviewed.
- ☐ CSV/CSA signed off; HITL SLA ratified; Guardrail tuned.
- ☐ Pen test + HITRUST/SOC 2 evidence assembled; observability + runbooks adopted.
