

Utilization Management

Applies clinical criteria, screens for disparate impact, prepares a recommendation — the medical director decides.

8.7%→22.7%

one insurer's post-acute denial rate after deploying an AI tool (2019–2022, Senate report)

~82%

overturn-on-appeal rate cited for some AI prior-auth/denial tools

70%

of health plans prioritizing agentic AI for UM, prior auth, and claims (Deloitte)

How we solve it

gather_clinical → evaluate_criteria → fairness_screen → draft_recommendation → compliance_check → [Medical Director gate] → finalize

Outcomes

- Faster, consistent criteria review
- Fairness-screened, auditable record
- Determination stays human
- Defensible under CMS / 1557

The bright line

`payer.issue\_determination` is withheld from every agent; an adverse recommendation is forwarded for a human determination, never auto-denied.
